Re: Hollow Tread "Recap" tires

---

Polytech LLC has recently become aware of a potential implementation problem involving certain recap tires and our line of RAAFT tracks. RAAFT tracks are designed to work with tires that have a strong, solid tread lug for full engagement with our lugs. We have found that the inferior hollow lug that is showing up on some of the recap tires does not have the integrity needed to be paired with RAAFT tracks.

As such Polytech does not recommend pairing tires with this kind of inferior hollow lug (see picture below) with RAAFT tracks.
